An isotope of Bohrium (Bh) was found to have a relative isotopic mass of 267. It was reacted with a mixture of HCl and O₂ gases to form a volatile oxychloride, BhO₃Cl, in the following reaction.

What combined volume of O₂ and HCl, measured at room temperature and pressure, would be needed to produce 0.0010 g of BhO₃Cl?

- A** 0.068 cm³ **B** 0.10 cm³ **C** 0.17 cm³ **D** 0.34 cm³
