

26 The table shows the boiling points of three hydrogen halides.

	HCl	HBr	HI
boiling point	-85°C	-67°C	-35°C

Why is there an increase in the boiling points of the hydrogen halides from hydrogen chloride to hydrogen iodide?

- 1 Induced dipole forces between molecules increase in strength.
- 2 Hydrogen bonds between molecules increase in strength.
- 3 Covalent bonds between the atoms increase in strength.
