

- 3 In a single covalent bond, one pair of electrons is shared by two atoms.

Which statement is correct for **all** single covalent bonds?

- A Covalent bonds are stronger when there is a difference in electronegativity between the two atoms that make up the bond.
- B In covalent bonds the electrons are centrally placed between two atoms.
- C The formation of covalent bonds is accompanied by a release of energy.
- D When covalent bonds are formed each of the bonded atoms attain a full outer shell configuration.
