

- 8 Two chlorides were examined separately and found to have the following properties.

One is a white powder which forms a colourless, slightly acidic solution on dissolving in water. The other is a colourless liquid which, on mixing with water, fumes and leaves an acidic solution with a pH of less than 3.

Which pair of compounds has properties that correspond with these?

- A MgCl_2 and Al_2Cl_6
- B MgCl_2 and PCl_3
- C PCl_5 and PCl_3
- D PCl_5 and SiCl_4
