

2 In the interhalogen compound ICl , there is a single polar covalent bond.

Which of the following statement(s) helps to explain the polarity of the $\text{I}-\text{Cl}$ covalent bond?

- 1 Cl is more electronegative than I .
- 2 The outer shell electronic configuration of both elements is $s^2 p^6$.
- 3 The outer shell electrons are more shielded from nuclear charge in I than they are in Cl .

A 1, 2 and 3 **B** 1 and 2 **C** 1 and 3 **D** 1 only
