

- 16** Solutions **E**, **F**, **G** and **H** contain HCl(aq) , $\text{CH}_3\text{COOH(aq)}$, NaOH(aq) and $\text{NH}_4\text{Cl(aq)}$ but not necessarily in the same order. The concentration and pH for each solution are shown below.

solution	concentration / mol dm^{-3}	pH
E	1.0	4.0
F	1.0	5.8
G	0.01	12.0
H	0.01	2.0

Which statements are correct?

- E** contains a weak acid while **H** contains a strong acid.
- Mixing 10 cm^3 of **E** and 500 cm^3 of **G** produces a buffer solution.
- Mixing 10 cm^3 of **F** and 50 cm^3 of **H** produces a buffer solution

A 1, 2 and 3

B 1 and 2 only

C 1 and 3 only

D 2 and 3 only
