

- 30 A reaction scheme starting from aqueous copper(II) sulfate is shown below. Both **G** and **H** are copper-containing species.

Which statement is correct?

- A** NH_3 is a ligand in reaction I.
- B** Reaction II is a redox reaction.
- C** **H** is a deep blue solution containing $[\text{Cu}(\text{NH}_3)_4(\text{H}_2\text{O})_2]\text{SO}_4$.
- D** The entropy of the system decreases when reaction III occurs.
