

16 Covalent bonds are formed by orbital overlap.

Which bond is **not** present in $\text{HC}\equiv\text{CCH}_2\text{CH}=\text{CH}_2$?

- A a π bond formed by $2p-2p$ overlap
- B a σ bond formed by $1s-2sp$ overlap
- C a σ bond formed by $2sp-2sp^2$ overlap
- D a σ bond formed by $2sp^2-2sp^3$ overlap
