

- 3 Ions of the two most common isotopes of zinc are shown below:

Which of the following statements is correct?

- A** Both these Zn^{2+} ions have the same number of electrons but different number of protons.
- B** Both these Zn^{2+} ions have the same electronic configuration $1s^2 2s^2 2p^6 3s^2 3p^6 3d^8 4s^2$.
- C** The ${}_{30}^{64}\text{Zn}^{2+}$ ion has fewer neutrons in its nucleus than the ${}_{30}^{66}\text{Zn}^{2+}$ ion.
- D** The ${}_{30}^{66}\text{Zn}^{2+}$ ion will be deflected more than the ${}_{30}^{64}\text{Zn}^{2+}$ ion in an electric field of the same strength.
