

- 30** When drops of $\text{NH}_3(\text{aq})$ are added to $\text{Cu}(\text{NO}_3)_2(\text{aq})$, a pale blue precipitate is formed. This precipitate dissolves when an excess of $\text{NH}_3(\text{aq})$ is added, giving a dark blue solution.

Which of the following process does **not** occur?

- A** ligand exchange
- B** acid-base reaction
- C** reduction of Cu^{2+} ions
- D** formation of a complex ion
