

- 12** The halogen astatine lies below iodine in the Periodic Table. The properties of astatine can be predicted from the trends in the properties of Group 17.

Which predictions can be made for astatine?

- 1 It forms a hydride whose bond energy is greater than that of hydrogen iodide.
- 2 It is less electronegative than iodine.
- 3 It oxidises chloride ions to chlorine.

A 1 and 3

B 1 only

C 2 and 3

D 2 only
