

- 18** Acidified potassium manganate(VII) oxidises the compound iron(II) ethanedioate, FeC_2O_4 , to iron(III) ions and carbon dioxide.

The relevant half-equations are shown.

How many moles of iron(II) ethanedioate are oxidised by one mole of potassium manganate(VII) in acid solution?

- A** 0.33 **B** 0.60 **C** 1.67 **D** 3.00
