

1 X, Y and Z are different sub-atomic particles.

X has a mass of 9.11×10^{-31} kg and Y has a mass of 1.67×10^{-27} kg.

Z is not deflected when passed through an electric field.

What could be the identities of X, Y and Z?

	X	Y	Z
A	electron	neutron	proton
B	electron	proton	neutron
C	proton	electron	neutron
D	proton	neutron	electron
