

16 X and Y are two elements from Period 3 (Na to Cl) of the Periodic Table.

Element X has the third highest melting point of the elements in the period, and it has an oxide that reacts with water to produce an alkaline solution.

Element Y has a chloride that reacts with water to produce fumes of hydrogen chloride. The oxidation number of Y in this chloride is +3. Y has an oxide that does not react with water.

What are the identities of X and Y?

	X	Y
A	magnesium	aluminium
B	magnesium	phosphorus
C	sodium	aluminium
D	sodium	phosphorus
