

- 22** A 5 g cube of lithium is added to an excess of water. The volume of hydrogen gas evolved is measured over time until the reaction is complete.

The experiment is repeated with a 5 g cube of another Group 1 metal, Z, and an excess of water at the same temperature.

Which row is correct?

	rate of reaction with Z	total volume of hydrogen gas evolved with Z
A	faster than with lithium	less than with lithium
B	faster than with lithium	the same as with lithium
C	slower than with lithium	less than with lithium
D	slower than with lithium	the same as with lithium
