

23 Amoxicillin is a drug used to treat infections.

The breakdown of amoxicillin in the blood is a first-order reaction. An original concentration of amoxicillin of 15.00 mg dm^{-3} decreases to 1.875 mg dm^{-3} after 183 minutes.

How many minutes will it take for a concentration of amoxicillin to decrease from 10.0 mg dm^{-3} to 2.50 mg dm^{-3} in the blood?

A 61

B 91.5

C 122

D 244
