

- 12 The Michaelis-Menten graph shows how the initial rate of reaction vary as the concentration of the substrate changes for an enzyme-catalysed reaction.

Which statement could explain the shape of the graph?

- A** The enzyme is acting as a limiting reagent and is being used up in the reaction.
- B** Substrate molecules inhibit the enzyme at high concentrations which resulted in a constant rate.
- C** The reaction will reach a constant rate when all active sites of the enzyme are occupied.
- D** At high substrate concentration, the order of reaction with respect to substrate is 1
