

16 H_3PO_4 is a triprotic acid. At 25 °C, H_2PO_4^- has a K_a value of $6.3 \times 10^{-8} \text{ mol dm}^{-3}$.

What does the following expression represent?

$$\frac{1.00 \times 10^{-14}}{6.3 \times 10^{-8}}$$

- A** K_a of H_3PO_4 **B** K_a of HPO_4^{2-} **C** K_b of H_2PO_4^- **D** K_b of HPO_4^{2-}
