

16 This question refers to 'reaction X' in which compound P is converted into compound R.

This reaction can be broken down into two stages.

The energy profile of reaction X is shown.

Which rows about the magnitudes of activation energy and enthalpy change of reaction are correct?

		magnitude of activation energy	magnitude of enthalpy change of reaction
1	for reaction X	ΔE_3	ΔE_5
2	for stage Y	ΔE_1	ΔE_3
3	for stage Z	ΔE_6	ΔE_7

A 1, 2 and 3

B 1 and 2 only

C 2 and 3 only

D 1 only
