

- 3** Molecule X contains two elements, one from the second period and one from the third period of the Periodic Table.

One of the elements has the smallest atomic radius in its period (excluding Group 18, the noble gases), while the other element has two electrons only in its p sub-shell.

What is the formula of molecule X?

- A** CCl_4 **B** CS_2 **C** SF_6 **D** SiO_2
