

- 1** Atom Q has a nucleon number of 70. It has ten more neutrons than protons.
- Atom R also has a nucleon number of 70. It has two fewer neutrons than atom Q.
- Which statement is correct?

- A** Q is a zinc atom; R is a germanium atom.
- B** Q is a zinc atom; R is a nickel atom.
- C** Q is a zirconium atom; R is a molybdenum atom.
- D** Q is a zirconium atom; R is a strontium atom.

- 2** An element has the successive ionisation energies shown.
