

- 24** Initially, 2.0 mol of dinitrogen tetroxide, N_2O_4 , is placed in a flask of volume 1.0 dm^3 at $T^\circ\text{C}$.
The flask is sealed and the contents left to reach equilibrium.

At equilibrium, 2.0 mol of nitrogen dioxide, NO_2 , is present.

What is the value of the equilibrium constant, K_c , at $T^\circ\text{C}$?

- A** 0.25 **B** 0.50 **C** 2.00 **D** 4.00
