

7 Gases can be liquefied under certain conditions.

Which statements about liquefaction of a non-polar gas are correct?

- 1 Some gases can be liquefied at room temperature by applying pressure.
- 2 The strength of the intermolecular forces is negligible at high pressure.
- 3 The strength of the intermolecular forces becomes more significant at low temperature.

A 1, 2 and 3 **B** 1 and 3 only **C** 2 and 3 only **D** 1 only
