

- 22** Curves 1 and 2 show the Boltzmann distributions for identical compositions of a reaction mixture which occur at different temperatures.

Which statement is correct?

- A** Curve 1 applies to the reaction occurring with the higher rate constant and point W indicates particles with higher energy than point Z.
- B** Curve 1 applies to the reaction occurring with the higher rate constant and point W indicates particles with lower energy than point Z.
- C** Curve 2 applies to the reaction occurring with the higher rate constant and point X indicates particles with higher energy than point Y.
- D** Curve 2 applies to the reaction occurring with the higher rate constant and point X indicates particles with lower energy than point Y.
