

18 Chromium(III) hydroxide, $\text{Cr}(\text{OH})_3$, is sparingly soluble.

What is the minimum pH required to precipitate chromium(III) hydroxide from chromium(III) nitrate solution given that the concentration of chromium(III) ion in the solution is less than 1.5×10^{-15} ?

The numerical value of the solubility product of $\text{Cr}(\text{OH})_3$ is 6.3×10^{-31} .

A 5.13

B 6.09

C 7.91

D 8.87
