

- 10 Curves 1 and 2 show the Boltzmann distributions for identical compositions of a reaction mixture which occur at different temperatures.

Which statement is correct?

- A Curve 1 applies to the faster reaction and point W indicates particles with lower energy than point Z.
- B Curve 1 applies to the faster reaction and point W indicates particles with higher energy than point Z.
- C Curve 2 applies to the faster reaction and point X indicates particles with lower energy than point Y.
- D Curve 2 applies to the faster reaction and point X indicates particles with higher energy than point Y.
