

- 18** In the free radical substitution of 2-methylbutane with chlorine, a mixture of mono-chlorinated compounds was obtained.

Assuming the rate of reaction at all the carbon atoms are the same, which statements are correct?

- 1 The ratio for the two compounds with the highest yields is 2:1.
- 2 Homolytic fission only occurs in the initiation step.

3

One of the products formed in this reaction is

- A** 1 and 2 only
B 1 and 3 only
C 2 and 3 only
D 1 only
