

- 24** The classic red colour from many lipsticks are obtained from pigments and dyes, such as the compound, eosin. Eosin reacts with proteins of the skin to produce a deep red colour.

Eosin

Eosin was reduced separately by NaBH₄ and by H₂ with Pt.

What is the number of hydrogen atoms added to each molecule of eosin?

	NaBH ₄	H ₂ with Pt
A	2	4
B	2	6
C	4	4
D	4	6

Commented [JY8]: Rephrase. Should not use + in prose.
