

- 9 The half-life of the first-order gaseous reaction in which M_2 molecules become converted into M atoms is 40 minutes. 1 mol of M_2 is put into a sealed vessel at pressure p .

What will be true when 87.5% of M_2 has been converted into M atoms?

- 1 80 minutes have elapsed.
- 2 1.5 mol of M have been formed.
- 3 The total pressure is $\frac{15}{8} p$ (at constant pressure).

- A** 1, 2 and 3
B 1 and 2 only
C 2 and 3 only
D 3 only
