Assume that the elements in the fourth period show a similar periodicity to those in the third period.

Arsenic and selenium are in the fourth period of the Periodic Table.

Which values are smaller for selenium than for arsenic?

- 1 the atomic radius
- 2 the first ionisation energy
- 3 the number of 4p orbitals containing one or more electrons

A 1 and 2 **B** 1 and 3 **C** 1 only **D** 2 and 3
