

28 Which statement about the shapes of ethane or ethene is **incorrect**?

- A Each carbon atom in ethane is tetrahedral, it forms four σ bonds.
- B Each carbon atom in ethene is trigonal planar as each carbon atom forms three σ bonds and one π bond.
- C Ethane is a non-planar molecule as each carbon atom forms four σ bonds.
- D Ethene is a planar molecule as each carbon atom forms only two σ bonds and one π bond.

29 The structures of the repeat units for the different polymers 1, 2 and 3 are shown.
