

Which statement describes the bonding in a molecule of HCl ?

- A** One particle is a $1+$ ion, the other particle is a $1-$ ion, they attract each other.
- B** One particle has a partial plus charge, the other particle has a partial minus charge, they attract each other.
- C** The two nuclei in the molecule are attracted to a shared pair of electrons.
- D** The nucleus of one particle is attracted to the lone pairs on the other particle.

6 N_2F_2 can be represented as FNNF . The table describes the number of π bonds in N_2F_2 and in N_2 .
