

- 9** When equal volumes of 1.00 mol dm^{-3} hydrochloric acid and $v \text{ mol dm}^{-3}$ of sulfuric acid were separately neutralised by excess dilute sodium hydroxide, the heat liberated was $2a \text{ kJ}$ and $a \text{ kJ}$ respectively.

What is the concentration, v , of the sulfuric acid?

- A** 0.25 mol dm^{-3}
- B** 0.50 mol dm^{-3}
- C** 1.00 mol dm^{-3}
- D** 2.00 mol dm^{-3}
