

- 4 Beryllium is the first member of Group 2 and forms covalent compounds which are said to be electron deficient. In many ways, beryllium resembles aluminium.

Which statement regarding compounds of beryllium is correct?

- A** BeF_2 acts as a Lewis base when it reacts with NH_3 to form the $\text{BeF}_2 \cdot \text{NH}_3$ adduct.
- B** $\text{BeF}_2 \cdot \text{NH}_3$ is a planar molecule.
- C** BeF_4^{2-} contains two co-ordinate bonds.

D

The  polymer cannot form hydrogen bonds with H_2O .
