

3 When chloroethane is added to NaOH(aq) , a reaction occurs slowly.

When iodoethane is added to NaOH(aq) , a reaction occurs at a faster rate.

Which statement explains these observations?

- A** The C-Cl bond is more polar than the C-I bond.
- B** The C-I bond is more polar than the C-Cl bond.
- C** The C-Cl bond is weaker than the C-I bond.
- D** The C-I bond is weaker than the C-Cl bond.
