

- 13** When acidified potassium manganate(VII) acts as an oxidising agent, the MnO_4^- ion is reduced to Mn^{2+} .

Ethanedioate ions, $\text{C}_2\text{O}_4^{2-}$, on oxidation form carbon dioxide only.

How many moles of ethanedioate ions are oxidised by one mole of potassium manganate(VII)?

- A** 2.0 **B** 2.5 **C** 3.5 **D** 5.0
